

# A Smart, Eco-Friendly Choice

## Cold fluid applied liquid rubber

IWS liquid rubber products are a smart, eco-friendly alternative to most conventional products. By minimizing waste, the products are renewable alternatives with low environmental impact compared to conventional products. They provide a durable membrane with multiple application methods.

- Water-based, contains no solvents
- Requires no heat or special ventilation
- Emits no VOC's
- Minimizes the burden on landfills
- Earns LEED credits

IWS liquid rubber products can be applied over many existing systems, virtually eliminating the need for removal of existing systems. The durable, lightweight membrane never has to be replaced. If damaged, repairs can be achieved by simply re-applying the product to the affected areas. Transported in recycled shipping containers, applicators do not need to dispose of anything. Nothing goes to the landfill, no raw materials are wasted and no fuel is burned in transport to a disposal facility.

### ENVIRONMENTALLY SAFE

Designed to be safe for the environment and to human health, IWS liquid rubber products are water-based, solvent free and non-toxic. The cold applied, water-based formula requires no flames and emits no harmful fumes. IWS liquid rubber products do not pose the health or safety risks inherent in conventional products that contain high levels of VOC's, which can be harmful to your health and the earth's atmosphere. The amount of VOC's in IWS liquid rubber products are below detectable limits.

### LEED CREDITS

With IWS liquid rubber products you can earn LEED points in the following categories:

SSc7.2 - Heat Island Effect - Roof

MRC1.1 - Building Re-use

MRC3 - Sustainable Purchasing Facility Alterations/Additions

### OTHER PRODUCT FEATURES

MIAMI-DADE TESTED & APPROVED

### ECONOMICAL

Substantial cost savings when compared to traditional systems.

### SEAMLESS

Cold spray applied resulting in a monolithic seamless membrane.

### ELONGATION & RECOVERY

Approximately 1000% elongation with a recovery rate of over 90%. Traditional products have 100% - 500% elongation and most have a recovery rate of less than 50%, if they have any recovery at all.

### SELF-HEALING

This is a unique benefit that most products don't have. IWS liquid rubber products are self-sealing and self-healing when punctured or cut.
